

House Building Mobile Solutions

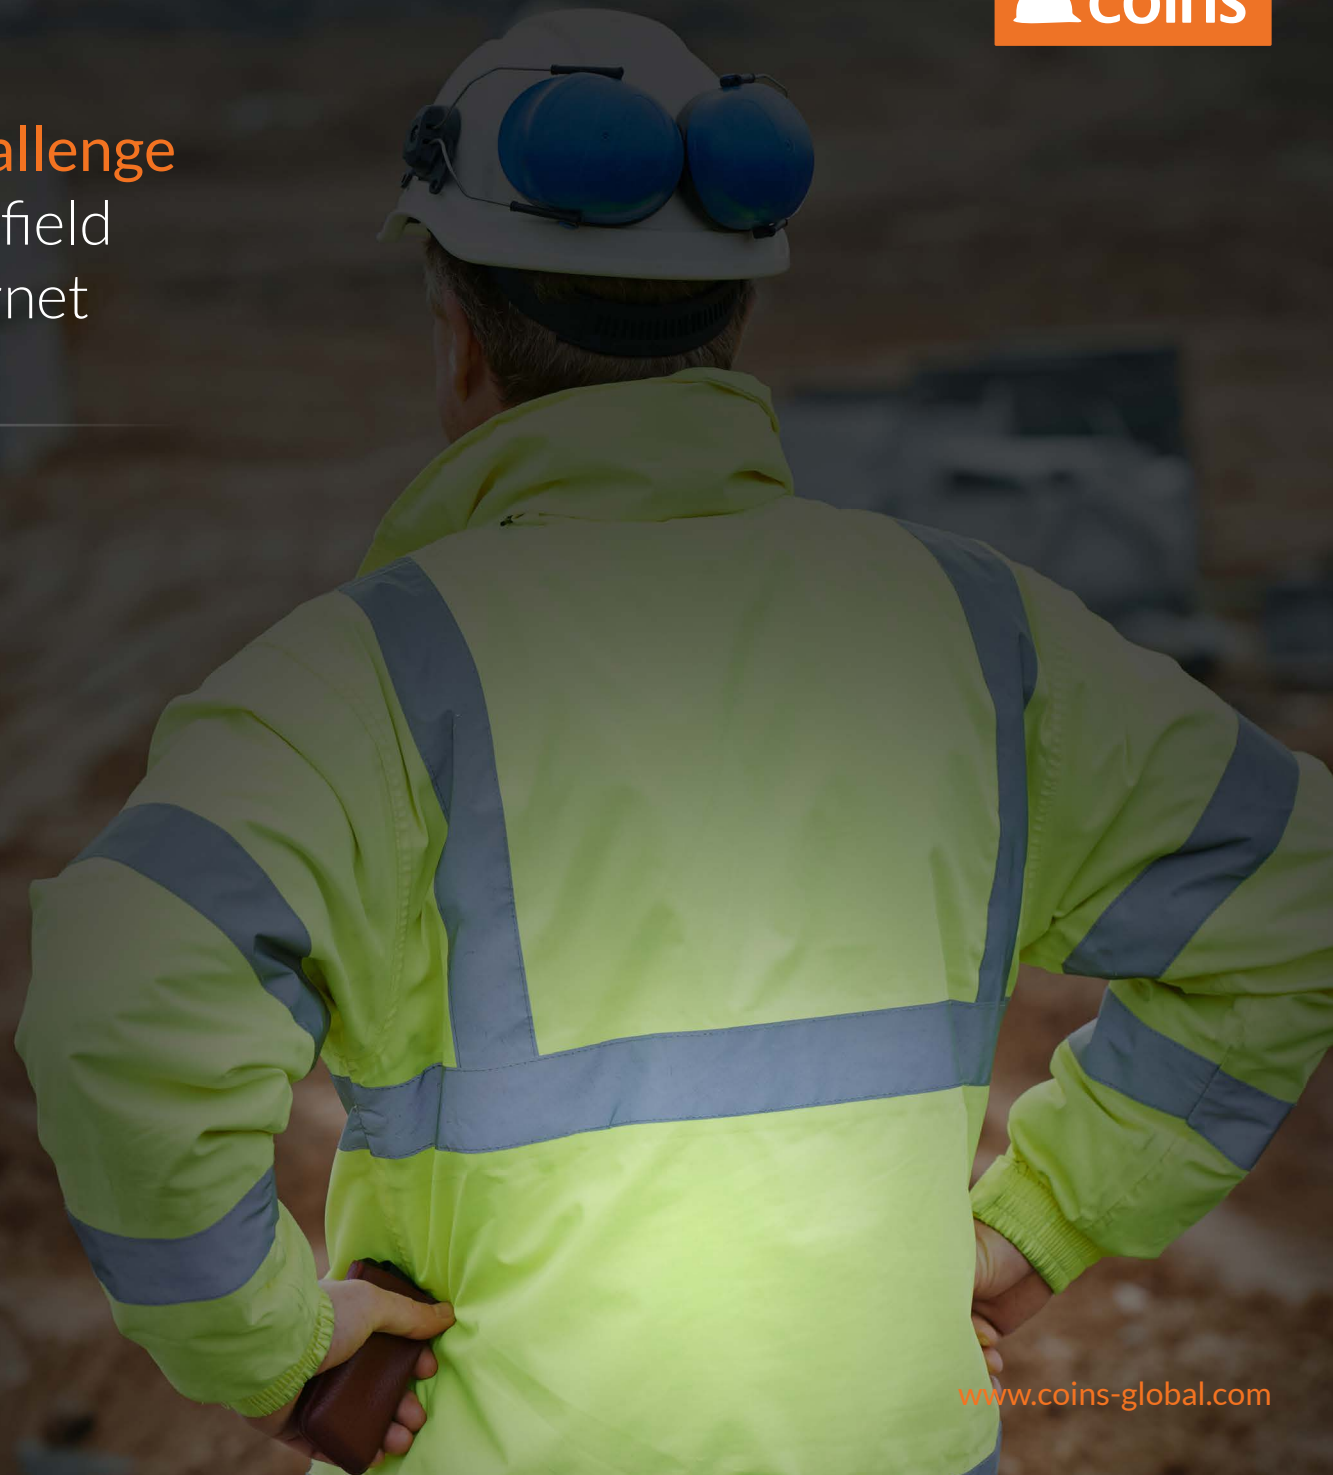

COINS Mobile mSite

Get complete visibility of your housing construction status
by plot with our plot progress app

Keeping housing construction progress up-to-date can be a challenge

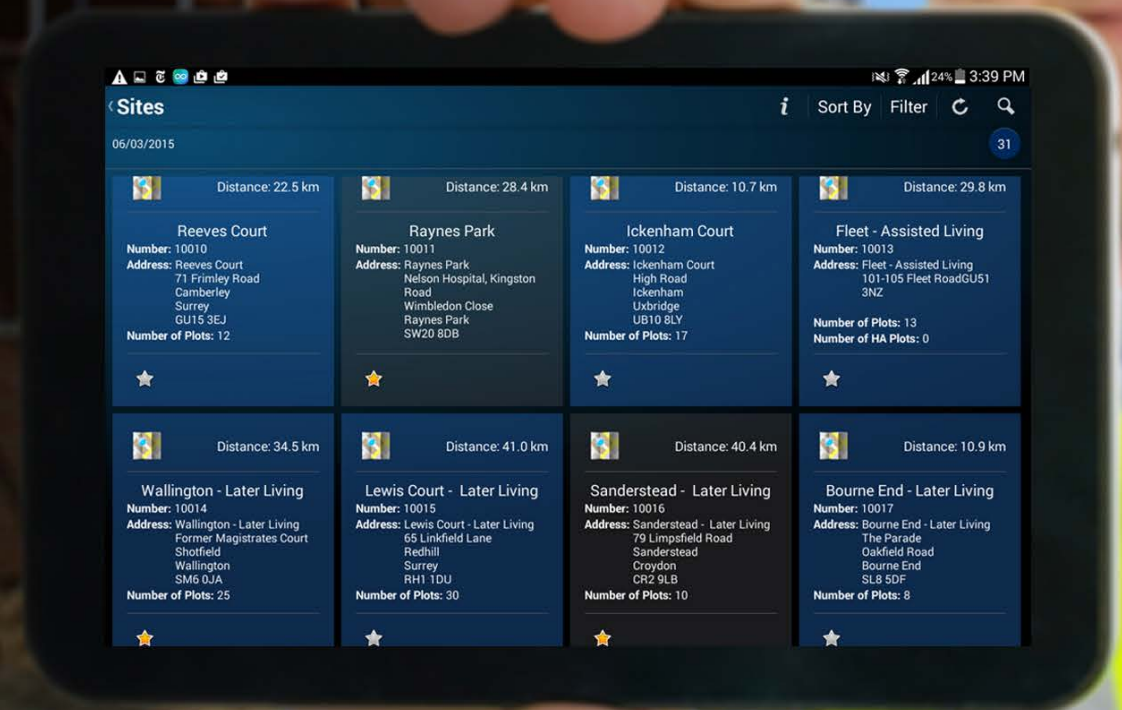

Especially when you're in a greenfield site with no mobile signal or internet connections.

Wouldn't it be great if plot progress information such as deadline dates as well as location and site information could be generated once and then shared with other stakeholders?

mSite allows site managers to quickly and easily update the construction stages of multiple plots, saving time and effort and providing real time information to managers back at head office.

By using a mobile application on a smartphone or tablet, you can link your construction site managers directly to the COINS back-end system.

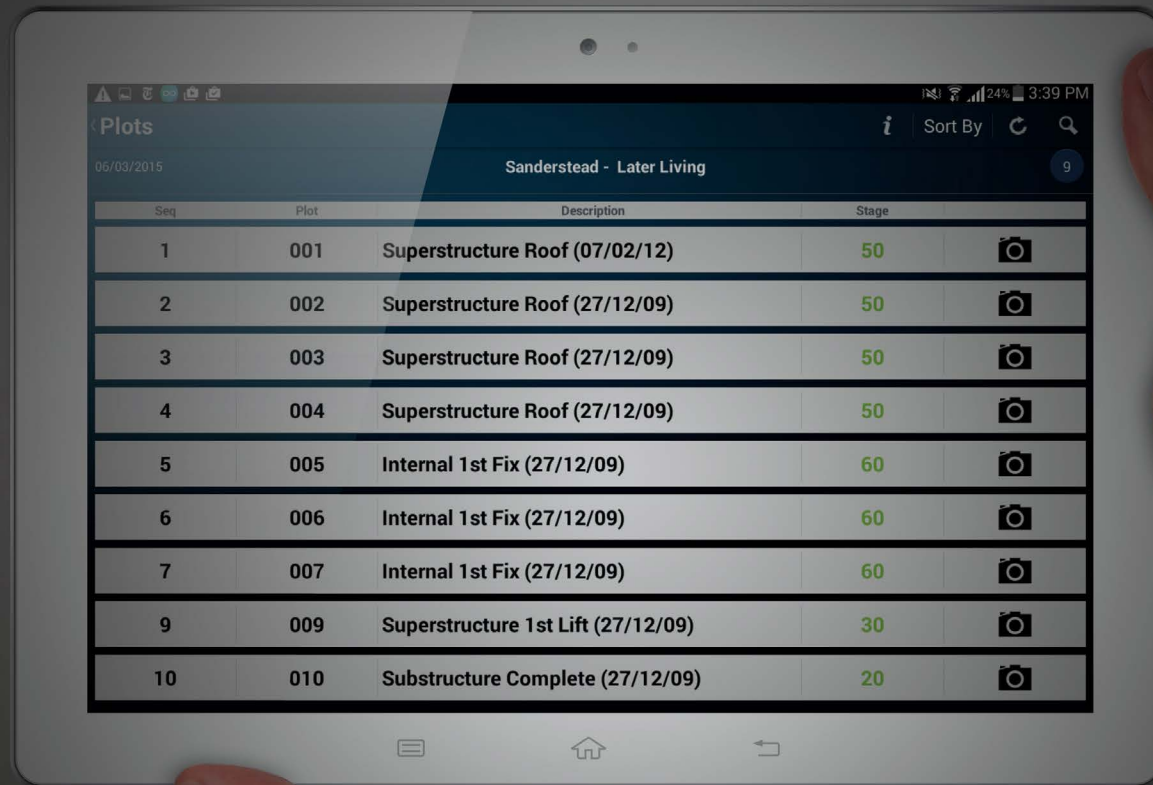

A construction worker wearing a white hard hat and a high-visibility yellow vest over a grey jacket is seen from behind, holding a tablet computer. The tablet screen displays a software interface with a list of construction sites, each with a small thumbnail image and the text 'Substructure Sta.'. The background is a blurred construction site with scaffolding.

Make it easy for busy site managers to keep plot status information accurate and up-to-date. Its easy to use interface is ideal for use by field based construction staff without the need for in-depth IT training.

Easily upload relevant information in a variety of formats - site information including photos, images and notes can be attached to each construction stage of each plot.

Help to keep the construction forecast up-to-date

updating the construction stage status for each plot on the development can have a direct impact on the construction forecast and keep sales staff informed of plot construction status and foresee plot readiness.

Seq	Plot	Description	Stage	
1	001	Superstructure Roof (07/02/12)	50	
2	002	Superstructure Roof (27/12/09)	50	
3	003	Superstructure Roof (27/12/09)	50	
4	004	Superstructure Roof (27/12/09)	50	
5	005	Internal 1st Fix (27/12/09)	60	
6	006	Internal 1st Fix (27/12/09)	60	
7	007	Internal 1st Fix (27/12/09)	60	
9	009	Superstructure 1st Lift (27/12/09)	30	
10	010	Substructure Complete (27/12/09)	20	

Send plot progress information directly to the COINS construction workbook managers and planning staff can instantly see and share the current project stage with relevant stakeholders.

Implementing mSite significantly improves efficiency

which reduces overheads and can improve competitiveness. Positive results for your management team – and your customers.

Increased visibility and productivity

mSite gives you complete visibility of your plot progress as well as more efficiency on-site and reduced administration overheads at head office. Site managers and office-based commercial managers can focus on their core role rather than dealing with paperwork or re-keying information.

Better quality data and insight

Good quality data is the basis of good quality management reporting. mSite makes it quick and easy to instantly record plot progress information in one place, without the need for re-keying which saves time and removes the risk of errors.

Because the data is immediately sent back to COINS (as soon as a mobile connection is established), you can be sure that accurate updates are always available to your managers to aid management decisions.

Better relationships

Up-to-date information is critical in a tightly run construction schedule. By feeding back real site progress to update construction forecasts, and providing accurate information to sales and construction managers, mSite ensures you are working with the most accurate and up-to-date information available. This provides assurances to the management team and, in turn, ensures a better relationship with the end-client.
